Art Unit: 3632

This is the second office action for serial number 10/058,769, entitled Moving Yoke, in response to Amendment A filed on June 20, 2003.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 16 recites the limitation "third axis" in line 3. There is improper antecedent basis for this limitation in the claim. The applicant has tried to claim a third axis but a second axis has not been disclosed therefore the examiner has determined that the "third axis" as claimed is a second axis which the applicant has called a third axis in name only.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3632

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-12, 14-21 (as best understood in regards to claim 16) are rejected under 35 U.S.C. 102(b) as being anticipated by Flynt 2,512,636. Flynt discloses a first yoke (L-shaped brackets attached to motors 24 and 25); second yoke (18 and 13) having an arcuate portion and at least one pinion gear (14 and 15); third yoke having two parts rotatable relative to one another, one said part (7) having an arcuate rack (9), and another part (1), means for supporting an object for pivotable movement about a second axis (10); power means being electric motors (23-25). The third yoke is slidable relative to the second yoke.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Flynt in view of Saldana, Sr. (Saldana) 5,690,420. Flynt discloses all of the limitations of the claimed invention except for the light source. Saldana teaches

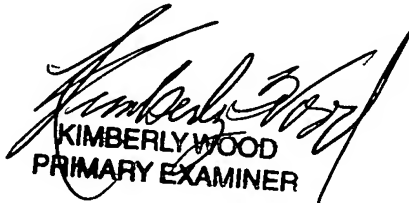

Art Unit: 3632

that it is known to have a light source within a 1<sup>st</sup> and 2<sup>nd</sup> yoke members being rotatable to one another. It would have been obvious to one having ordinary skill in the art at the time of the invention to have included a light source as taught by Saldana for the purpose of allowing the light source to adjustably tilt and pivot in various angles.
